

WMS Version Updates

Version: 2.0.17.0

Date Release: 08-08-2008

1. Advanced Picking:

- a. Added – New grid on the Confirm tab of the picking screen, this shows at a Stockcode level what has and had not been picked. This screen is color coded as follows
 - i. Red - Outside tolerance up or down
 - ii. Yellow - Within tolerance
 - iii. Green - Exact pick
- b. Added – When items are picked, they drop off the list of items to pick, this list thus only shows items that were reserved and have not been auctioned.
- c. Added – A new system setting has been added to allow items to be automatically skipped when the required quantity has been met.
- d. Added – Two new system settings to allow and disallow over and under picking, this is over and above the tolerance setting for over's and unders.
- e. Added – On the main list of picking slips assigned to a user, this has been color coded to show which picking slip and warehouse combos have been completed.

2. Prebatching;

- a. Added – On the main prebatching screen Kit issue items have been greyed out so the user cannot edit these lines.
- b. Added – The system logs all actions that are performed in the background when the post button is pressed. These events are then shown to the user at the end of processing. This was required as there are multiple jobs created, so if one fails we need to know what has happened.

- c. Bug- Some of the system settings for prebatching were against GENERAL, these have been moved into PREBATCHING

3. Job Allocation:

- a. This is a new system that has been added, please see Technical Documents for more into on this program and its function in the WMS.

4. Pallet Reservation: (Used by Sales Order Allocation and Job Allocation Programs)

- a. Added – System setting to force the exact reservation that the Sales Order/ Job is calling for.
- b. Added – System Setting to force every line to be reserved on the Job/Sales order before a Picking Slip Can be created.
- c. Added – System setting for a list of warehouses, this allows the user to reserve stock from more than one warehouse.
- d. Added – Ordering by the created date of the Pallet has been added. This screen now orders on BinType then FIFO.

5. Picking Slip Review

- a. Bug – Fixed a bug when a Picking Slip is allocated to a user, the system duplicated records on the report. This has been fixed.

6. Main Menu:

- a. Removed – All the greyed and non-used items on the main menu have been removed.
- b. Made a small change to the logo was too big, made smaller to allow for the main menu to grow properly.
